Hello.

My name is Ramis and I'm QA engineer with more than 8 years work experience.

On current job:

- Write ui tests on playwright + jest, using allure-reports.
- Write api tests with axios and jest. Using gitlab ci with dind to run tests from my own repo.
- Write my own allure-reports hub on react + express to get reports from gitlab. Run it on companies server in docker-container.

Also, I'm the only tester on project, that's why my responsibilities includes manual testing and all test documentation. Now I writing an app on NestJS and ReactJS to find devices in company, and mark device as taken (links on repositories in cv).

I prefer js/ts, but also have experience with java and python langs. Working with charles proxy, postman (with writing js scripts to save data (like session tokens) in variables, filter data arrays and so on) and many over tests tools.

Vakazov R.
