About me

I enjoy testing and IT at all, have mathematicians education and love to solve problems. I work as QA specialist for last 8 years. Has experience as QA lead, manual functional tester and automation test engineer.

For last 5 years write auto tests on js/ts for ui web and rest api tests. Using docker to run tests on Gitlab-ci. In my personal time, to solve needs in custom software I have learn ExpressJS, NestJS and ReactJS.

Education

2006 — 2011

Ulyanovsk State University

Applied Mathematics,
Mathematician

Skills

Manual testing

API testing

Test documentation

Automation testing: rest-api, web ui, slack/
telegram bots, allure hub.

JS/TS: playwright, puppeteer, protractor, axios,
jest, allure.

Dev: ExpressJS, NestJS, ReactJS, redux, redux-
toolkit, rtk-query.

Have experience with python and java.

Work History

February 2017 —
current

RTK IT

QA Engineer

My responsibilities:

- Manual and automation (E2E) testing of the main web site of our department <https://wink.ru>, its mobile adaptation and admin panels.
- All kinds of manual testing: functional, regression, smoke, acceptance, usability and other.
- Automation testing: rest api and web UI.
- Code review of other js/ts testers.
- CI integration on gitlab ci. Run tests from docker container on ci or from local machine.
- Discussing new features with other team members (with product owner, designers, developers, qa)

Tools: charles proxy, fiddler, postman, docker, virtual box. Mockiavelli for mocking request in auto tests.

On this project I'm using playwright+jest to write auto tests for regression testing.

Writing api tests with axios+jest to check, that api is not changing, or that its changes will not affect on ui.

I'm using custom matchers to have custom "error message" for each test and making screenshot on failure. I use allure reports because they are more interactive than native playwright reports.

Wrote softAssertion class for multiple assertions. When I want to check, that ui includes all locators or smth like this. It store error messages and on method assertAll checks for errors.

Run tests in parallel with 8 workers from local machine, or 3 workers from gitlab ci.

Develop allure-reports hub. Using express.js for backend (leaf-db for storing projects names) and reactjs + redux on frontend. I just unpack and generate report to folder with project name. Put it to static folder and it become routes for ui.

Now I developing service for monitor devices in company. Using NestJS (db: postgresql) as backend and ReactJS (NextJS, redux-toolkit, rtk-query) for front. Links on code in the end.

June 2014 —
february 2017

SimbirSoft

QA lead

My responsibilities:

- all kinds of testing: regression, functional, smoke, acceptance (exclude security);
- automation testing;
- managing a team of 3 qa;
- testing FrontEnd and BackEnd;
- wrote test documentation: test cases, check lists, test plans, use cases and other;
- making estimates for testing;
- conducted interviews with candidates;
- trained interns and students.

QA lead on bank services project.

On this project we use manual and automation ui testing.

Usages: java 7, selenium webdriver, junit/testng, jdbc, teamcity, allure.

Lead of load testing project.

Usages: jmeter, AWS

November 2012 —
march 2013

ITECH.group

QA engineer

My responsibilities:

- Functional testing
- Regression testing
- Smoke testing
- Acceptance test
- Also I'am testing documentations and prototypes

Code examples
